

ENVIRONMENTAL DECLARATION

according to the PN EN ISO 14021 standard

KOFATERM INDOOR PAINT

Environmental protection and reducing energy consumption are important elements of the long-term development strategy of KOFARB Sp. z o.o. As an active economic entity, we are aware of the risks associated with excessive use of natural resources and take all necessary precautions to prevent them. We identify risks and responsibly manage relationships with our customers who operate in areas that affect the natural environment.

One of the most important guidelines of our mission is to have a defined, continuous direction for actions aimed at reducing carbon dioxide. We declare a special commitment to introducing environmentally friendly technologies to the market. Our high-quality KOFATERM paints and masses with low VOC (up to $5,5\text{g/dm}^3$) content are safe for users and, due to their thermo-reflective and thermo-insulating properties, are environmentally friendly.

In all areas of our business, we follow a sustainable development strategy and prioritize quality policies, which include identifying and monitoring all aspects that have an impact on the environment. We recognize our role and opportunities in engaging in pro-ecological projects. With our expertise and experience, we are able to support our clients' efforts to transform their energy use and move towards low-emission activity.

Areas where we can provide professional support include, primarily:

- projects related to thermo-modernization of existing infrastructure
- projects supporting the development of modern, low-emission infrastructure
- projects for comprehensive energy solutions that contribute to energy savings.
